MEMORANDUM FOR: Assistant for Plans and Development, WPIC

SUBJECT : Visit [redacted]

25X1A

25X1A

1. Reference is made to project [redacted] wherein it is requested that an investigation and report be made on the reproduction material produced and/or marketed [redacted]

25X1

25X1A

2. On 18 December 1964 the undersigned visited this company, inspected their product and discussed it with [redacted] technician, and [redacted] Maintenance and Lab Technician.

3. [redacted] a small company which produces one model (9") of the [redacted] copier and the sensitized material used with this equipment [redacted]. The processing chemicals are produced by a chemical concern [redacted] and are distributed [redacted]. The company also markets several other reproduction processes, such as the [redacted] Zinc Oxide Electro-static process [redacted]

25X1A

4. The polymicro process is a stabilization process using slow contact papers which can be handled in subdued light and is not unlike the [redacted] equipment and material which we already have. I had a few prints made which are attached as enclosure (1), I also picked up some brochures enclosure (2), and obtained samples of paper and chemicals for experiments with resolution targets and gray scales in our exploratory laboratory.

25X1A

5. On the basis of my discussion with [redacted] personnel regarding the uses that have been made of the process, and the test samples produced for my evaluation I am satisfied that the process and materials do not contain the definition, resolution or gray scale required for our use.
